

**Vermont's Guide  
to  
Fluoride Levels  
in  
Public Water Systems**

April 2012

## **Welcome**

Welcome to the 2012 revised version of Vermont's Guide to Fluoride Levels in Public Water Systems. *Please note the current recommended level for fluoride in public water systems is 0.70 parts per million (ppm).* Please recycle previous fluoride booklets you may have in your office. This guide booklet is updated every three years.

The Vermont Department of Health (VDH) encourages primary care providers to identify children at risk for Early Childhood Caries (ECC) and to help ensure that those children have access to early preventive care. A key preventive measure for ECC is the proper use of fluoride, both systemically and topically. Fluoride makes a tooth more resistant to decay, inhibits the bacteria's ability to create acid, and promotes remineralization of white spot lesions (early decay). These effects on teeth are both pre-eruptive and post-eruptive.

### **Children should receive:**

- **One systemic source**
- **Multiple topical sources, starting at the age of 6 months for maximum effect**

### **Systemic Sources**

Community Water Fluoridation

Natural occurring beneficial levels of fluoride in primary drinking source

Prescription fluoride drops or tablet supplementation

### **Topical Sources**

Fluoridated toothpaste (a pea size amount for very small children)

Over the counter fluoride mouthrinses (over the age of 6)

School-Based Fluoride Mouthrinse Program

Fluoride treatments in a dental office

Fluoride varnish applied by a primary care provider

### **Fluoridation Information**

All communities that fluoridate their water adjust the natural occurring fluoride concentration to the level recommended for optimal health. The current recommended level for fluoride in public water systems is 0.70 parts per million (ppm).

The recommended fluoride level has changed over time. This is because Americans have access to more sources of fluoride than they did when water fluoridation was first introduced in the United States in the 1940s. Water is now one of several sources of fluoride. Other common sources include dental products such as toothpaste and mouth rinses, prescription fluoride supplements, and fluoride applied by dental or other medical professionals.

Water fluoridation and fluoride toothpaste are largely responsible for the significant decline in tooth decay in the U.S. over the past several decades.

## Why should Primary Health Care Providers use this booklet?

Primary health care providers (pediatricians, family physicians, physician assistants, nurse practitioners, etc.) and dentists make decisions daily as to the need for prescribing fluoride supplements for children.

This information will enable you to determine at a glance, the level of fluoridation the family is already receiving from their community water system prior to prescribing any supplementation. If the family is served by a private well or spring system, their water must be tested prior to prescribing a dietary fluoride supplement.

## How to use this Booklet

In this booklet, each public water system is listed by town, followed by the results of their existing fluoride levels. A public water system is defined as a system with 15 “connections” or 25 yearly residents (Safe Drinking Water Act, Section 1401(4) Definition for a Public Water System 1996). The public water fluoride levels in this booklet represent both the naturally occurring fluoride and those water systems that fluoridate.

Communities with fluoride levels (naturally and those water systems that fluoridate) with levels 0.3 part per million (ppm) or above are in bold. For example, if you look on page 2 of the Public Water Systems by Towns, you will find the town of Bloomfield has naturally fluoridated water at 0.4 ppm. Looking at the dietary fluoride supplement schedule below, this level falls in the category 0.3 - 0.6 ppm and therefore, for under age 3 - no supplementation; for 3-6 yrs - 0.25 mg/day; and for 6-16 yrs - 0.50 mg/day.

### Dietary Fluoride Supplement Schedule - 2010

Approved by the  
American Dental Association  
American Academy of Pediatrics  
American Academy of Pediatric Dentistry

Age	Fluoride ion in Drinking water (ppm)		
	Less than 0.30 ppm	0.30-0.60 ppm	Greater than 0.60 ppm
Birth- 6 months	None	None	None
6 months-3 years	0.25 mg/day	None	None
3-6 years	0.50 mg/day	0.25 mg/day	None
6-16 years	1.00 mg/day	0.50 mg/day	None

## **Families with private wells or springs - extra caution**

If families are on private wells or spring systems and the fluoride level is unknown, they must test their water prior to obtaining a fluoride supplement prescription. There are geographic areas around Vermont where private well or spring waters are well above the recommended level for optimum oral health. It is therefore very important that prescriptions are NOT written for children who may already be receiving high levels of naturally fluoridated water. The only way to know for sure is to test the well water for its level of natural fluoride BEFORE prescriptions for supplements are written. The VDH Laboratory will test private wells for families with children 4 years of age and under for free. The Vermont Department of Health Laboratory Fluoride in Well Water Order Form is included in this booklet. This form can be duplicated in your office.

For Children over 4 years of age, the fluoride testing is available for a service fee at the Department of Health Laboratory or any other certified laboratory.

### **When to recommend testing for fluoride in their water:**

- ✓ For families whose water supply is not located in this booklet, i.e. wells or small systems (under 15 connections or 25 yearly residents).

### **Where testing is available for fluoride:**

- ✓ The Vermont Department of Health Laboratory (VDHL) will test fluoride in private well water for families with children under the age of 4 for free. The VDH Lab will test fluoride for a service-fee for families with children over age 4. Any other certified laboratory for water analysis can test for fluoride levels in the water.

### **The Health Care Provider responsibilities are to:**

- ✓ Determine the existing fluoride content in the families' primary source of water prior to prescribing fluoride supplements.
- ✓ Consider the water source for infants and children in daycare facilities and school prior to prescribing supplements.
- ✓ Use this booklet to locate their town, then the water system name.
- ✓ Go to the result column where the fluoride levels will be found in parts per million (ppm). Highlighted are the systems with fluoride levels equal to or greater than 0.30 ppm.
- ✓ Refer to the Dietary Fluoride Supplement Schedule for prescription guidelines.

## **FLUORIDE IN WELL WATER ORDER FORM INSTRUCTIONS**

- ✓ Section A: Fill in your provider office information prior to copying this form
- ✓ Copy this 2 sided form for a future resource supply
- ✓ Section B: To be filled out by the parent/guardian
- ✓ Parents mail the prepaid form directly to the VDH Lab

Or

Fax the form directly to the VDH Lab  
FAX: 802-863-7632
